

Define Map the User Flow for Numera AI

Task:

Define the end-to-end user journey with Numera AI — from onboarding to final report delivery.

Break it down into clear, simple steps that reflect both UX and backend logic.

User Enters

Select Interaction Mode (Text/Voice)

Provide income info

Provide expences info

Deduction Optimization

Financial Suggestions

Report Generation

Final Review & Submissiom

User Flow: Numera AI Assistant

Step 1: Welcome & Onboarding

The assistant greets the user and briefly explains what Numera AI does.

The user chooses their preferred interaction mode:

→ Text-based chat or Voice assistant

Step 2: Data Input

The user either manually inputs income and expenses

Or securely connects their bank account via Plaid or another financial API

Numera AI retrieves transaction data in real time

Step 3: Clarification Dialogue

The assistant asks clarifying questions for ambiguous transactions:

→ “Was this a business or personal expense?”

→ “Which category does this fall into?”

Step 4: AI Categorization & Optimization

AI automatically classifies expenses (e.g. travel, software, marketing)

Detects deductible business expenses

Provides a live, visual summary of income, expenses, and taxable amounts

Step 5: Report Generation

The user clicks “Generate Report”

A PDF or CSV report is created for either quarterly or annual filing

All reports are stored and accessible in the user's history

Step 6: Financial Suggestions

AI provides actionable recommendations based on data:

→ “You may deduct \$320 this quarter.”

→ “Ad spending is above average — consider a review.”

Step 7: Payment & Export

If using a paid plan, the user completes payment

The final report can be downloaded or shared with an accountant / IRS
