

Define User personas for Numera AI

Numera AI is built to support small business owners and self-employed professionals who face the challenge of managing tax reporting and financial organization without dedicated finance teams. Below are the four core personas that represent the product's target audience:

The Solo Entrepreneur

Profile:

Runs a one-person business (consultant, coach, designer, etc.)

Often overwhelmed with admin tasks and lacks accounting expertise

Wants an easy, affordable way to stay compliant and organized

Goals:

Track income and expenses easily

File taxes correctly without hiring a CPA

Focus more on growing their business

Pain Points:

Doesn't understand tax categories or deductibles

Finds tools like QuickBooks too complex

Feels anxious during tax season

The Freelancer / Creative Professional

Profile:

Works project-to-project (photographer, writer, video editor, etc.)

Has multiple income sources, inconsistent cash flow

Comfortable with tech but not with financial documentation

Goals:

Automatically categorize expenses

Understand how to reduce taxable income

Save time by automating quarterly tax reports

Pain Points:

Manual tracking takes too much time

Often forgets which expenses can be deducted
No clear view of income vs expenses

The Small Agency Owner

Profile:

Leads a 2–5 person service agency (marketing, web dev, etc.)
Has light accounting support but still handles finances personally
Wants structured, easy financial visibility

Goals:

Consolidate bank data and team expenses
Get instant reports for quarterly taxes
Stay on top of cash flow with minimal effort

Pain Points:

Juggling spreadsheets, invoices, receipts
No simple way to separate team vs personal spending
Too busy for detailed manual input

The Independent Tax Consultant or Bookkeeper (optional advanced persona)

Profile:

Works with multiple clients
Needs efficient ways to gather, organize and file client data
Open to using AI tools to improve their productivity

Goals:

Use Numera AI to onboard clients easily
Let clients self-report with smart AI support
Speed up report generation

Pain Points:

Time-consuming back-and-forth with clients
Manual review of receipts and bank statements
Needs smarter, self-serve tools for clients
