

Prompt Design Approach

In this project, I applied four core prompt types to structure an intelligent, responsive AI assistant:

System Prompts to define assistant behavior, tone, and logic across all sessions

Interview Prompts to guide users step-by-step through data collection

Chain Prompts for reasoning-based answers, especially in financial suggestions

Tree Prompts to dynamically adapt responses based on user input

Each prompt was crafted to ensure natural conversation, accurate data handling, and a seamless user experience.
